A VIDEO showcasing just how much the Facebook app tracks you has been shocking people on social media.

Thanks to Apple's iOS 14 software update, iPhone users can now observe how an app will use your personal data.

Apple exposing all the ways Facebook tracks you with it iOS app is really quite something
pic.twitter.com/hDhB85qk1L

— Tom Warren (@tomwarren) December 16, 2020

Tom Warren, Senior Editor at tech publication The Verge, tweeted the shocking video.

If you're an iPhone user with iOS 14 you'll also be able to scroll through the information on your own phone.

The privacy labels should appear on the App Store on the page of your app of choice.

Apple required developers to submit their privacy practices so Apple users have more transparency before they download an app.

Facebook may be tracking more than you thinkCredit: AFP or licensors

The feature has only just started rolling out but already people are shocked by just how much apps want to know.

Tom Warren's video scrolls through the new App Privacy section for the Facebook app.

It shows a page which states: "The following data may be used to track you across apps and websites owned by other companies".

It then goes on to show that your data may be tracked for things like Third-Party Advertising and Product Personalisation amongst other uses.

It says data may be collected and linked to your identity for things like finding out your location, what you purchase, your contacts, your browsing history and more.

The video shows just how long the list is.

Warren captioned his tweet: "Apple exposing all the ways Facebook tracks you with it iOS app is really quite something."
